Content Management

A Community — **Content Management Solution** is a website (group of websites) or application that is a virtual community. A web community may take the form of a social network service, a forum, a group of blogs or a web application.

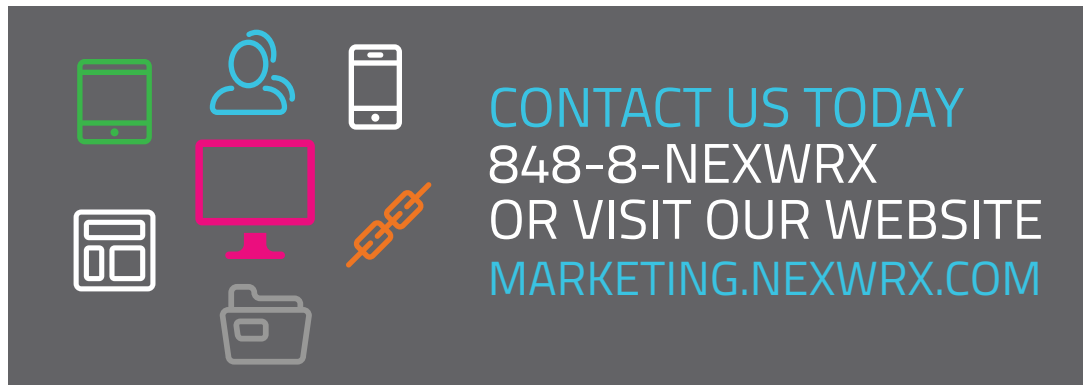

If you're looking to build a new website from scratch, or rebuild your current site, you may have heard that CMS offers a number of benefits.

Supported CMS Solutions

We are experts in PHP and MySQL - the environment required for OpenSource software like Drupal, Wordpress or Joomla.

Maintaining Your Website

A website properly built in a CMS presents a user-friendly, non-technical system for adding, editing and maintaining content. It can also be cost-effective for small sites.

Why Should I Consider a CMS?

CMS makes the web more usable. It is the software that provides an easy way to organize and manage web content for non-techies. It lowers the barriers to entry and makes it much easier to launch a site, keep it updated and get more out of it.

This is an enormous boost to the small business or organization that doesn't have a massive tech budget. It simplifies the process and puts the web site back into the hands of content creators, allowing you to spend more time on what really matters — your content. Reasons why you should use a CMS:

- [Several FREE CMS Options Available](#)
- [Maintain the Website Yourself](#)
- [Multiple Users & Locations](#)

Site maintenance is usually handled by a webmaster. Most organizations either have a design-saavy staff member or hire an outside designer to create the site. But what happens if the staff member or designer leaves town? This often leads to websites becoming outdated as site owners, who depended on a webmaster, find themselves without the skills to continue updating the site.

At **Nexwrx**, we develop a CMS solution that allows you to make the updates yourself.

CMS makes maintaining and updating a web site simple and affordable.
